Junior QA (Student position)

Qualification task

👋 Welcome note

Welcome, Space Explorer! 🙂
As a Junior Quality Assurance Cadet, you're about to embark on a mission to ensure the seamless operation of our starship's systems. Your task is critical to our journey across the cosmos, where even the smallest glitch can send us off course.
In this adventure, you'll test and troubleshoot, ensuring every component is in top shape for our interstellar voyage. Prepare for a challenge that's out of this world, and remember: your keen eye for detail is our best navigation tool through the vast expanse of space. Let's make this mission a stellar success!

🧑‍🚀 What you'll explore?

ResX is the go-to destination for last minute restaurant reservations. This app is a reservation exchange platform for last minute reservations at New York and Miami's most in demand restaurants. Through the application, users can claim last minute reservations and trade in reservations they can't go to so that other users can claim the reservations for themselves, without booking weeks in advance.

Main functionalities

- Claiming reservations
- Submitting reservations
- Setting up alerts
- Account management.

🔭 TASK: What's the mission?

The task is to **create test cases for the home tab in the application**.

- Consider the current flow and outline what needs to be tested.
- Anticipate potential issues and devise test cases to address those situations. This type of testing will aid QA engineers in determining what aspects of this screen require testing.
- The document format is flexible, but ensure reusability!

On the home screen, you will find some test reservations that you can play with (this is not real data, so don't worry 🙂). Explore what other features are available on the home screen (don't bother with the submit flow, my reservations, or the account page).
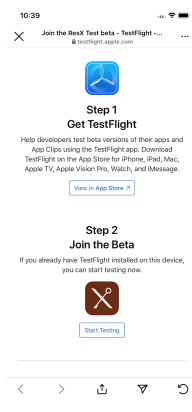

🚀 Instructions to download: Start your space journey here!

First, pick your starship system:

<u>iPhone starship</u>:

    1. Open the link https://testflight.apple.com/join/QAN3UsJ3
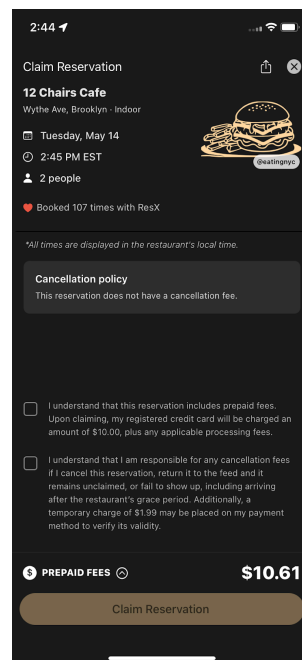

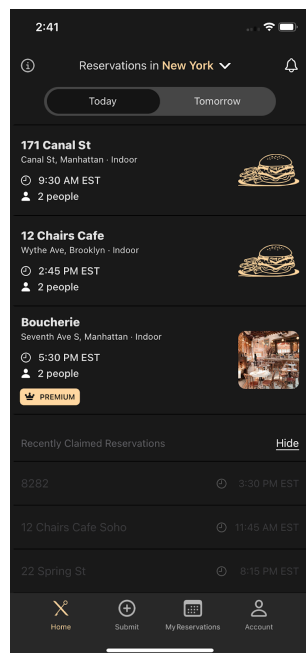

2. Follow Step 1 from the link:

   Download TestFlight via App Store

3. Follow Step 2 from the link:

   Install the app on your phone to start testing

Android starship:

1. Open the link:

   https://drive.google.com/drive/folders/1ZOxW5gwcJwhDmRNcmQJJGQ8xxz uJqMhf?usp=sharing

2. Download and install the **ResX_1.4.0.apk** apk file (make sure that your phone has permission to install apps from Chrome)

3. Log in:

   Phone number: +38594999999

   Login pin: 509463

🥳 Mission accomplished, Space Explorer!

You've reached the final frontier of this task. Now, it's time to transmit your findings back to mission control.

Please send your completed results to anja@spaceinch.com no later than Stardate **2024.05.27 by 23:59** hours (Earth time).

We eagerly await your report and look forward to seeing how your keen insights will help steer our starship to new galaxies. 💪

***

Safe travels, and may your journey into the world of Quality Assurance be as boundless as the stars!

🌌🌟🌠
